

BudgetMaster

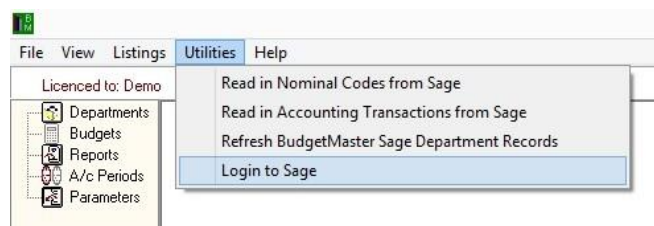

Flexible & Variable Period Reporting, and Departmental Budgets for Sage 50 Accounts

BudgetMaster has been designed to allow budgeting against departments in Sage 50 Accounts. The user can specify up to 13 variable accounting periods and choose date ranges (e.g. 28 days, 4-4-5, etc.)

Dynamic integration with Sage 50 Accounts means that nominal codes and departments can be brought into BudgetMaster at the click of a button. Budgets can then be allocated to individual departments for each nominal code. Duplication keys allow quick and easy copying of budgets across multiple departments and if 12 accounting periods are used the annual budget can be automatically apportioned across all periods.

Users can design their own report layouts to suit individual requirements, sub totals can be introduced at any point and either value or percentage variances shown. A 12 monthly Trial Balance report can be produced with each month in its own column. There is also an automatic standard Trial Balance.

BudgetMaster is available in a single-company/single-user version or alternatively as a multi-company/multi-user version. Multi-company businesses can use BudgetMaster to consolidate their accounts.

Charities can use BudgetMaster to produce reports in the required "SOFA" format and any organization that has special reporting requirements will find the program invaluable.

Features

- Budgeting for individual departments by nominal code
- Up to 13 variable accounting periods
